W. H. O. Murdered Africa

by William Campbell Douglass, M.D.

(September 1987 National Health Federation Monthly Bulletin)

The object of the World Planners is control--absolute control. Although the desire to rule the world is not a new ambition, the control sought by this generation of World Planners is of a greater, more pervasive, wealth-and-resources, than control ever before sought. What the World Planners want--in order to complete their plan is control of population.

Their control of population is in their ability to control the thoughts and behaviour of the masses. The method which the World Planners are using to achieve their aim of absolute control is mind-boggling one which attempts to unravel it. It is truly a "tangled web of deception".

Before the World Planners can achieve their goal of "absolute control" of the world population, they must first reduce the existing numbers to an optimum controllable level. The World Planners estimate that planet earth can only sustain a 2.5-billion population by the year 2000, but "Spaceship Earth", according to the United Nations' figures, already has in excess of 4.5-billion people. This discrepancy is essential for the World Planners not only to bring population growth to a stand still, but it also becomes necessary for a "cull back" in population (the world is to be depopulated), hence zero population programs.

In the New World Order, man will become a "throw away". You will be allowed to exist until you become "surplus to requirements".

"The world has a sick man and the cancer he has observed one World Planner in the book, Mankind at the Crossroads, is--Africa."

Having set the optimum population number for planet earth, the World Planners have also set a date by which to achieve their optimum population number. And that date is the year 2000. The organisation formed to implement their plan is called GLOBAL 2000.

The following article, "W.H.O. Murdered Africa" is evidence of this plan in action.

The world planners are convinced that what they are doing is for he eventual salvation of mankind and the planet earth. The greatest strength they possess is that the general public does not even know hat they exist.

Trust in the Lord with all thine heart; and lean not unto thine own understanding. In all thy ways acknowledge him, and he shall direct thy paths. Proverbs 3:5-6 KJV

W. H. O. MURDERED AFRICA

There is no question mark after the title of this article because the title is not a question. It's a declarative statement.

WHO, the World Health Organization, murdered Africa with the AIDS virus. That's a provocative statement isn't it?

The answer to this trifle mystery, Murder on the WHO express, will be quite clear to you by the end of my report. You will also understand why the other suspects, the homosexuals, the drug addicts, the Haitians, were only pawns in the homicidal plot which WHO invented.

If you believe the government propaganda that AIDS is hard to catch then you are going to die even sooner than the rest of us. The common cold is a virus. Have you ever had a cold? How did you catch it? You don't really know, do you? Did you get it from a handshake? Or from a kiss? Or was it from the left in the world?

Yellow fever is a virus. You catch it from mosquito bites. Malaria is a parasite also carried by mosquitoes. It is many times larger than the AIDS virus (like comparing a pinhead to a moose head), yet the mosquito easily carries this large organism to each victim.

The AIDS virus is enormous, also much larger than the AIDS virus, can be transmitted by fomites (inanimate objects such as towels). The AIDS virus can live as long as ten days on a dry plate. So, are you worried about your salad in a restaurant that employs homosexuals? You'd better be.

You can't understand this murder mystery and you wouldn't believe my conclusions unless you learn a little virology. I'll make it as painless as possible.

Many viruses are carcinogenic and many grow in humans but most of the viruses that affect animals don't affect humans. There are exceptions, of course, such as yellow fever and small pox.

There are some viruses in animals that cause very lethal cancer in those animals, but do not affect man or other animals. The bovine leukaemia virus (BLV), for example, kills cattle but it has never killed a human. The Simian virus 40 (SV 40) kills monkeys but it has never killed a human. The Visna virus kills sheep but it has never killed people had the "wrong" kind of sex. Change the genetic composition of some of the cells and you change the entire world.

The World Health Organisation in published articles, called for scientists to work with these deadly agents and attempt to make a hybrid virus that would be deadly to humans. In the bulletin of the World Health Organisation WHO, Volume 47, p. 259, 1972, they said, "An attempt should be made to see if viruses can in fact exert oncogenic effects in man." In other words, WHO was encouraging the creation of just the kind of virus that we have in the AIDS virus--a virus that causes virus deformity, more or less effectively, the cell responding to the virus.

That's AIDS. WHO, the World Health Organisation is "sick" and has a virus that selectively destroys the T-cell system of man, an acquired immune deficiency."

Why would anyone want to do this? If you destroy the T-cell system of man you destroy man. Is it even remotely possible that the World Health Organisation would want to develop a virus that would wipe out the human race?

If their new virus, called Acquired Immune Deficiency Syndrome, AIDS, is not deliberate, it's the most terrible and more malignant. Does this strike you as being a peculiar goal for a health organisation? The thought occurred to me.

Sometimes I believe in conspiracies and sometimes I don't. It depends on the subject. (Was there a conspiracy to kill President Kennedy? If you don't think so, then you must be in a state of shock.) Conspiracies, and some alleged conspiracies, are frightening. Some are terrifying. Some are homicidal and among native American Indians: After repeated transfer it can become a "taboo" infection for man, which it has not.

Before the World Planners can achieve their goal of "absolute control" of the world population, they must first reduce the existing numbers to an optimum controllable level. The World Planners estimate that planet earth can only sustain a 2.5-billion population by the year 2000, but "Spaceship Earth", according to the United Nations' figures, already has in excess of 4.5-billion people. In the bulletin of the World Health Organisation WHO, Volume 47, p. 259, 1972, they said, "An attempt should be made to see if viruses can in fact exert oncogenic effects in man." In other words, WHO was encouraging the creation of just the kind of virus that we have in the AIDS virus--a virus that causes virus deformity, more or less effectively, the cell responding to the virus.

That's AIDS. WHO, the World Health Organisation is "sick" and has a virus that selectively destroys the T-cell system of man, an acquired immune deficiency."

Why would anyone want to do this? If you destroy the T-cell system of man you destroy man. Is it even remotely possible that the World Health Organisation would want to develop a virus that would wipe out the human race?

If their new virus, called Acquired Immune Deficiency Syndrome, AIDS, is not deliberate, it's the most terrible and more malignant. Does this strike you as being a peculiar goal for a health organisation? The thought occurred to me.

Sometimes I believe in conspiracies and sometimes I don't. It depends on the subject. (Was there a conspiracy to kill President Kennedy? If you don't think so, then you must be in a state of shock.) Conspiracies, and some alleged conspiracies, are frightening. Some are terrifying. Some are homicidal and among native American Indians: After repeated transfer it can become a "taboo" infection for man, which it has not.

But it doesn't take a bad breakfast to see an amazing concatenation of events involving Russian and Chinese communist nationals, the World Health Organisation, the National Cancer Institute and the Rockefeller Foundation.

But what about the green monkey? Some of the best virologists in the world and many of those directly involved in AIDS research, such as Robert Gallo and Luc Montagnier, have had the opportunity to travel to Africa. Besides, Gallo is a Communist. Nicaragua and Cuba are two of his favourite countries. Gallo has some others for what they are in the process of doing.

And what they are in the process of doing is conducting germ warfare from Fort Detrick, Maryland against the free world, especially in the United States, even using foreign communist agents with the United States Army's germ warfare unit euphemistically called the Army Infectious Disease Unit.

You don't believe it? Carlton Gajdusek an NIH big-shot at Detrick admits it: "IN THE FACILITY I MAKE A BUILDING WHERE MORE GOOD AND LOYAL COMMUNIST SCIENTISTS WORK THAN IN HANLAND CHINA WORK, WITH FULL PASSPORTS TO ALL THE LABORATORIES. I'LL TAKE ANY CHINESE EVEN THE ARMY'S INFECTIOUS DISEASE UNIT IS LOADED WITH FOREIGN WORKERS NOT ALWAYS FRIENDLY NATIONALS."

Can you imagine that? A UN (United Nations) Russian or ecological warfare unit with the full blessings of the Jimmy Carters of this world?

I can assure you that the creation of the AIDS virus by the WHO was not just a diabolical scientific exercise that got out of hand. It was a cold-blooded successful attempt to create a killer virus which was then used in a successful experiment in Africa. So successful in fact that most of central Africa may be wiped out. 75,000,000 dead within 3-5 years.

It was not an accident. It was deliberate. In the Federation Proceedings of the United States in 1972, WHO said: "In relation to the immune response a number of experimental approaches can be visualised. They suggested that a weak virus could be made more virulent by serial passage in heterologous species or by recombination with a more virulent virus or genome." Translated into plain English, that means that you can make a virus more deadly by passing it back and observe the results. "This would be particularly informative in zibships," they said. That is, give the AIDS virus to brothers and sisters and see if they die, who dies first and how many die. Then you have a statistical experiment.

They used small pox vaccine for their vehicle and the geographical sites chosen in 1972 were Uganda and other African states, Haiti, Brazil and Japan. The present or recent past of all these countries is the homosexual area.

Dr. Strecker points out that even if the African green monkey could transmit AIDS to humans, the present known amount of infection in Africa makes it statistically impossible for a virus to spread as rapidly as AIDS has spread in the United States. In fact, WHO has admitted that in Africa only 1 out of 1,000 people infected, about every 14 months, when correlated with the first known and present known number of cases, prove beyond a doubt that a large number of people had to have been infected with the AIDS virus. Starting in 1972 when the first experiments were conducted, and allowing for the fact that the AIDS virus is a retrovirus, the source you get only a few thousand cases. From 1972 to 1987 is 15 years or 180 months. If it takes 14 months to double the number of cases then there would have been 13 doublings. We then 2 to the 13th power, or 8, 192 cases. That's a very small number of cases for a virus that has killed 75,000,000 people. Therefore, we are approaching World War II mortality statistics here--without a shot being fired.

Dr. Theodore E. Woodward, the medical doctor who created this unwanted child, the greatest murder mystery of all time. He should get the Nobel prize but he'll be lucky not to get "suicided." ("Prominent California doctor ties his hands behind his back and, hangs himself, and jumps from the 20th floor. There was no evidence of foul play").

Strecker was employed as a consultant to work on a health proposal for Security Pacific Bank. He was to estimate the cost of the health care for the future. Should they form a health maintenance organisation or not? He was working on estimating the current medical market he advised against the HMO because he found that the AIDS epidemic will in all probability bankrupt the nation's medical systems."

Can you imagine that? A UN (United Nations) Russian or ecological warfare unit with the full blessings of the Jimmy Carters of this world?

I can assure you that the creation of the AIDS virus by the WHO was not just a diabolical scientific exercise that got out of hand. It was a cold-blooded successful attempt to create a killer virus which was then used in a successful experiment in Africa. So successful in fact that most of central Africa may be wiped out. 75,000,000 dead within 3-5 years.

That's a very small number of cases for a virus that has killed 75,000,000 people. Therefore, we are approaching World War II mortality statistics here--without a shot being fired.

Dr. Theodore E. Woodward, the medical doctor who created this unwanted child, the greatest murder mystery of all time. He should get the Nobel prize but he'll be lucky not to get "suicided." ("Prominent California doctor ties his hands behind his back and, hangs himself, and jumps from the 20th floor. There was no evidence of foul play").

Strecker was employed as a consultant to work on a health proposal for Security Pacific Bank. He was to estimate the cost of the health care for the future. Should they form a health maintenance organisation or not? He was working on estimating the current medical market he advised against the HMO because he found that the AIDS epidemic will in all probability bankrupt the nation's medical systems."

He became fascinated with all the peculiar scientific anomalies concerning AIDS that kept cropping up. Why did the "experts keep talking about green monkeys and green monkey disease? Why was it always the African green monkey? Why was it always Africa? Why was it always Haiti? Why was some obscure African disease when in Africa it was suddenly a heterosexual disease? If the green monkey did it, then why did AIDS explode practically simultaneously in Africa, Haiti, Brazil, the United States and southern Japan?

Who, when it was proposed to the National Institute of Health that the AIDS virus was a combination of two bovine or sheep viruses cultures in human cells in a laboratory, why did the NIH people simply swallow it when that's exactly what occurred?

As early as 1979 the World Health Organisation was growing these deadly animal viruses in human tissue cultures. Cedric Mims, in 1981, said in a published article that there was a bovine virus contaminating the culture media of the WHO. Was this an accident or was it deliberate? If it was an accident why did WHO continue to use the vaccine?

This vivid and genetic death bomb, AIDS, was finally produced in 1974. It was given to monkeys and they died of pneumocystis carni, which is typical of AIDS.

Dr. R.J. Biggar reported in AIDS Journal, AIDS: ... could not have originated in the area where it was first identified." He forgot it didn't come out of Africa. AIDS was engineered in a laboratory by virologists. It couldn't engineer itself. As Doctor Strecker so colourfully puts it: "If a person has no arms or legs and shows up at a party in a tuxedo, how do you get them to dance?" Impossible.

There are 9,000 to the fourth power possible AIDS viruses. (There are 9,000 base pairs on the genome). So the fun has just begun. Some will cause knee-ish similar to the strains which have caused diseases from the cow virus and some that won't do anything. So the virus will be constantly changing and trying out new esoteric diseases on hapless man. We're only at the beginning.

Because of the trillions of possible genetic combinations, there will never be a vaccine. Even if they could develop a vaccine they would undoubtedly give us something worse. Why? Because the germ warfare creators of the brain, the same ones who gave us the AIDS virus, are the same ones who gave us the AIDS vaccine. Hepatitis vaccine.

There are precedents. This is not the first time the virologists have brought us disaster. SO-40 virus from monkey cell cultures contaminated polio cultures. Most people in their 40s are now carrying this virus through contaminated polio inoculations given in the early 60s. It is known to cause brain cancer which explains the increase in brain cancer in the last 20 years.

This is the origin of the green monkey theory. The polio vaccine was grown on green monkey kidney cells and the geniuses who brought us polio vaccine said: "We get away with it so far, so let's do it again." But they didn't get away with it. The contaminated polio vaccine has rapidly disseminated throughout the medical intervention. 64 million Americans were vaccinated with SV-40 contaminated vaccine in the 60s. An increase in cancer of the brain, possibly multiple sclerosis and God only knows what else. Even in the Third World today tetanus vaccination and the new measles vaccine are contaminated. Is this 1955 plot by the opposite 1955. Get the picture?

The SV-40 virus give rise to two more viruses which are very active in AIDS patients. Most young children and young adults have received the SV-40 inoculation from polio vaccination. Primary multifocal leukoencephalopathy (PML), brain rot, has been added to the burden of homosexuals who certainly had enough to bear having been given AIDS by their government.

The final piece of the puzzle is how AIDS devastated the homosexual population in the United States. It wasn't from smallpox vaccination as in Africa because we don't do that over here. It was from the hepatitis B vaccine. The Victorian connection.

Although some AIDS has been brought to the United States from Haiti by homosexuals, (it used to be one of their favourite "play-grounds"), it would not be enough to explain the explosion of AIDS that occurred simultaneously with the African and Haitian epidemics.

The AIDS virus didn't exist in the United States before 1978. You can check back in any hospital and no stored blood samples were found anywhere that exhibit the AIDS virus before that date.

What happened in 1978 and beyond to cause AIDS to burst upon the scene and devastate the homosexual segment of our population? It was the introduction of the hepatitis-B vaccine by the Merck Institute for Therapeutic Immunology of Aiblin.

A Doctor W. Schmugerer, born in Poland and educated in Russia, came to this country in 1969. His immigration to the US was probably the most fateful immigration in our history. He is also known as the head of the New York City blood bank. (How does a Ukrainian who has been trained doctor become head of one of the largest blood banks in the world? Doesn't that drive you as peculiar?)--He set up the rules for the hepatitis vaccine studies. Only males between the ages of 20 and 45, who were not monogamous and who were not homosexuals participate in this study. Can you see the reason, other than the desire to spread something among the population, is treating that all experimentees be promiscuous? Maybe you don't believe in the communist conspiracy theory but give me some other logical explanation Schmugerer set up the rules and chose the participants.

The hepatitis vaccine, unlike the AIDS vaccine, was not grown from human tissue culture. So accidental contamination didn't occur. The AIDS virus was probably put in the vaccine deliberately. Dr. Strecker is the Centre for Disease Control reported in 1981 that four percent of those receiving the hepatitis-vaccine were AIDS infected. In 1984 they admitted to 50 percent. Now they refuse to give out figures at all because they don't want to admit that 100 percent of hepatitis vaccine receivers are infected with AIDS.

Where is the data on the hepatitis vaccine studies? FOAT CDC? No, the US Department of Justice has it buried where you will never see it.

I have always said, and our forefathers told us this, that the greatest threat to the people is always government. Not foreign governments, but our own government. What has the government done to us?

* It is a homosexual disease--homosexuals certainly spread it but the primary responsibility wasn't theirs.
* It's related to oral intercourse--wrong.
* Only a small percentage of those testing positive for AIDS would get the disease--wrong.
* It's spread by kissing--wrong.
* It came from the cytomegalovirus--wrong.
* It was due to popping amyl nitrate with sex--wrong.
* It was started 10 years ago in Africa--wrong--(It started in 1972).
* You can't get it from mosquitoes--wrong
* The virus can't live outside the body--wrong.

The head of the Human Leukaemia Research Group at Harvard is a veterinarian. Dr. Judd, International Agency for Research on Cancer, the agency that requested the production of the virus in the first place, is also a veterinarian. The Rockefeller Foundation is heavy about the business of animal research and veterinary medicine.

Now there is nothing wrong with being a vet but, as we have pointed out, the AIDS virus is a human virus. You can't test these viruses in animals and you can't test diseases in them either. It doesn't work. So why would your government give Judd, a veterinarian, eight and a half million dollars to study leukaemia in a homosexual disease? Why would your government give a veterinarian immunology research grants?

The London Times should be congratulated for uncovering the smallpox/AIDS connection. But their expose was very misleading. The article states that the African AIDS epidemic was caused by the smallpox vaccine "triggering" AIDS in those vaccinated.

Dr. Robert Gallo recently won the Lasker award for some very scientific studies. Unfortunately, not in this theory. Whether the infection of 75 million Africans was deliberate or accidental can be debated but there is no room for debate about whether the smallpox shots "awakened the unsuspected virus infection." There is absolutely no scientific evidence that a completely unrelated virus was present in Africa when they were vaccinated. The vaccine was grown on rabbit kidneys. It's called live vaccine. The AIDS virus didn't come from Africa. It came from Fort Detrick Maryland, USA.

The solution is extremely desperate and the medical profession is no longer trusted (as usual) to take any action. Dr. Strecker attempted to mobilise the doctors through some of the most respected medical journals in the world. The prestigious Annals of Internal Medicine said that his material "appears to be entirely concerned with AIDS and its relation to a variety of homosexual practices."

In his letter to this medical publication Strecker said, "If correct human experimental procedures had been followed we would not find half of the world stumbling off on the wrong path to the future." Then the writer told of the world covering up the origination of the damned disease. It appears to me that your Annals of Internal medicine is participating in the greatest fraud ever perpetrated."

I guess they didn't like that so Strecker submitted his sensational and mind-boggling letter with all of the proper documentation to the British journal Lancet.

Their reply: "Thank you for that interesting letter on AIDS. I am sorry to have to report that we will not be able to publish it. We have no criticism" but their letter was returned with "overcrowded with submissions." They've too crowded to announce the end of western civilisation and possibly all mankind? I don't think that's reasonable.

WHAT CAN WE DO?

The first thing that should be done is close down all laboratories in this country that are dealing with these deadly retro-viruses.

Then we must sort out the insane, irresponsible and traitorous scientists involved in these experiments and try them for murder. Then maybe, just maybe, we can restaff the laboratories with loyal Americans who will work to save a remnant of people to re-populate and re-civilise the world.

End.

THE STRECKER MEMORANDUM

Thank you for requesting this information. We have a story to tell you, a very strange story, one that affects you, me, and every of the human being on earth. A story that must be taken seriously by the governments of every nation in the world because there may not be many humans left to govern by the turn of the century, or shortly thereafter. We have come to understand that, if it were not for the fact that it is true, it would make a great science fiction thriller. (Interestingly enough, Luminar Pictures of Hollywood has purchased the rights to Dr. Strecker's life story.)

The story begins in 1969, when Dr. Strecker, M.D., Ph.D., a world famous internal medicine and gastroenterology in Los Angeles. He is a trained pathologist and also holds a Ph.D. in pharmacology. Dr. Strecker and his brother, Ted, an attorney, were preparing a proposal for a health maintenance organisation (HMO) for Security Pacific Bank in Los Angeles. They needed to know the long-term health statistics of the bank's employees. AIDS patients. In as much as this information was not readily available in 1983, both brothers began researching the medical literature to learn what they could about this relatively new disease. The research was extensive and took almost a year to complete. By the end of 1984 they had completed a report which they called "The Strecker Memorandum." It was a five-year quiet culminating with the creation of "The Strecker Memorandum," the most controversial video tape of your time, and a remarkable set of documents called "The Bioattack Alert".

WHY IS EVERYONE AFRAID OF "THE STRECKER MEMORANDUM"?

The excuse that we hear over and over is that it is too controversial: TOO CONTROVERSIAL? They say that this information, if widely disseminated, will cause the public to panic. If scientist had polished your water supply and you and your family could die, wouldn't you want to know about it? Would you panic? Or would you take the necessary steps to protect you and your family? The fact is that the public has been lied to and misled by the very scientists who willingly or otherwise created AIDS and are now promoting misinformation by covering it up. After all, if you made AIDS would you tell anyone about it?

THINK OF YOUR FAMILY AND FRIENDS . . . . NOW THINK OF THEM DEAD

The number of AIDS infected people is doubling approximately every 14 months, and in some areas even sooner. With twelve to fifteen million Americans carrying the virus, you don't need a calculator to see how long we have here in the US before AIDS kills us all. The Strecker Memorandum estimates that the end of America as a country is in serious jeopardy because all through the 1970's they were buying their blood supply from Africa. On top of that, the World Health Organisation was growing the AIDS virus in monkey kidney cells and then using it in the Hepatitis B vaccine. Then, to top it off, the Rockefeller Foundation and the Southern Japanese Mafia, 30 percent of whom are homosexuals, became involved in the AIDS epidemic. Why? Because they saw an opportunity to use AIDS as a problem and no one can enter Russia permanently without a current negative blood test for AIDS. Cuba has already set up concentration camps for AIDS infected and they are also "cleansing" their VIP's ethnic. It will of course is unnecessary to mention that Russia and Cuba are communist countries who hate America to the day. And so it goes. Virtually every nation on earth with few exceptions (Iran is one) is reporting a growing problem. It's on every continent, every subcontinent, and every island chain, Atlantic and Pacific. So why won't the media or government tell you these things? Is it too controversial for you to handle? Are you going to panic?

IS THERE ANY HOPE?

Yes and no. NO, if you are waiting for the government to create a magic bullet, as they will say in "The Strecker Memorandum," part of the problem is that all the various AIDS viruses are "recombinant retroviruses." Very simply, that means they have the ability to recombine with the genes of any cell they enter and the offspring is never the same as the parent virus from the parent viruses. (In fact, the Strecker Memorandum says that the virus is mutating and changing so fast that it is likely to change itself 9,000V9,000V9,000V9000 times (which is 9,000 to the fourth power). The common cold recombines much less frequently and we haven't found a cure for it after 100 years. Therefore, it will make much more sense to prevent the spread of AIDS than to wait for a cure. Besides, as you will learn in the Strecker and growing number of realistic scientists are correct in looking at alternative, nonpharmatic, non drug modalities based on Rainen spectroscopy. In fact, there is a machine that is now in use in Europe and is undergoing experimentation in the United States that is said to be able to kill the AIDS virus in test tube. Called the Rife machine, it is said to be able to kill all viruses and bacteria, even cancer cells. Of course the FDA has declared that it has no use whatsoever for this machine. The cost of the machine is nominal, but we submit that research and development dollars are not forthcoming.

Thank you, THE STRECKER GROUP

STOP PRESS: At an International Conference in Edinburgh, Scotland on 11Fc medical experts say that women were now being infected with HIV at the world-wide rate of two a minute as the AIDS epidemic gathers pace. The World Health Organisation (WHO) Director said: "AIDS was still in its early stages. By the year 2000 they expected that more than 12 million women will have been infected of which a third, by then, would have died" (Source: Sydney Daily Telegraph Mirror, 8/9/1).
